

INKJET INSIGHT

Evaluate. Optimize. Grow.

This tint book shows the primary CMYK color values that can be reproduced using a specific paper on your inkjet device to help customers find the best match for their target colors.

Helping customers one color at a time

- Print tint book on papers qualified for your inkjet device.
- Print in simplex mode using custom ICC or device link created for each specific paper.
- Use press settings for resolution, speed, tension, dryer temperature and air flow used in production.

Provide customers/designers with samples on proposed stock. For their selected tint(s), they will enter CMYK values from the image into their design program to ensure accurate color.
